

1	AI can facilitate learning and personalize by adapting content to a person's knowledge.
2	When using AI to produce images, users should have a specific purpose in mind.
3	Generative AI can be a springboard for ideation , which is the process of generating and developing new ideas.
4	AI avatars allow users to have a very diverse set of AI presenters to use for content creation.
5	When transforming content into a different media type using generative AI, how users word what they want affects their output .
6	The act of making content changes to an image is called transforming an image.
7	Subtitles are useful when catering to an audience that is visually inclined, has trouble hearing, or watches videos in noisy areas.
8	In the context of images, interpolate is the process of enhancing frames to improve smoothness and quality of a video.
9	While AI can be used to explore artistic ideas with images, it is not meant to replace photo editing tools.
10	AI translations should be checked for accuracy before being used.
11	Generative AI can summarize data quickly, explaining something in a way that is short and to the point.
12	When gathering content, starting with something broad and narrowing it down to specifics can save time and give users ideas on how to hone in on detailed questions to ask for desired answers.
13	An AI engine's proofread feature can improve the grammar within a block of writing.
14	Many AI tools allow users to upload an image and then add motion , such as moving back and forth.
15	One benefit of Generative AI is the ability to transform content into different media types, such as text to image, text to video, and more.
16	Knowing how to word prompts properly is crucial in getting an appropriate data output given an input.
17	Colorization is a process in which black-and-white video gets color through the use of AI models.
18	Many AI tools can add or remove objects from a video, but in an effort to do so, the video may change drastically.
19	AI can easily obtain a solid, detailed description for an image, saving users the time of coming up with their own.
20	When generating video from a prompt, some tools include audio or subtitles , and some include both.

#	Question Name
1	If an AI tool is used as part of an application, users must ensure that they can prevent unauthorized access ____to the tool.
2	Sometimes, an AI model's output is unreliable, especially when dealing with time-____ sensitive ____information.
3	Rapidly changing data can make previous results obsolete _____.
4	The more specific ____users are when asking for an image to be generated, the more likely they will get the desired result.
5	Noise ____consists of disturbances added to data, often variations, while an AI model is being trained.
6	The closest to a universal standard for AI is the Organisation for Economic Cooperation and Development (OECD), an international organization with one of many frameworks _for how AI should be used.
7	Adobe Firefly's main tool generates images from text _____.
8	ChatGPT, Google Gemini, Anthropic Claude, and Meta LLaMa are text-based AI models _____.
9	Bias is a significant problem in AI as a(n) LLM _will only process data it can obtain.
10	When typing in Microsoft Office, Microsoft Copilot can anticipate text, which users can accept by selecting the ____ tab ____key on the keyboard.
11	Users should not assume that generative AI outputs are reliable _____.
12	LLMs take much energy to process, so a computer with a robust power supply is needed.
13	Large language models (LLMs) contain large amounts of training data, which is needed for LLMs to generate outputs based on input .
14	An AI model needs access to data often stored in the cloud ____, not on-premises.
15	Generative AI creates content based on data _____.
16	A slight change in a(n) prompt ____can create vastly different results in an output.
17	Generative AI models can be customized to perform individual tasks, often through self-contained _____ applications .

18	A(n) parameter is a variable that contributes to how data is transformed from input to output.
19	Part of a(n) diffusion model's specialty is taking low-resolution photos and making them high-resolution by using AI to fill in the correct colors for new pixels to enhance the photo's resolution.
20	If users require a specific output __ from an AI tool, then they should use generative AI.
21	It is best practice to avoid entering personal information into any AI chat engine, as there is always a risk that anything entered can be used to train a model further.
22	In many cases, it will take multiple inputs to get a(n) output _.

#	Question Name	
1	Automating Subtitling	
2	Image to Text	Step 1: Select the attachment icon within the prompt field Step 2: Select Upload from computer Step 3: Select 233-smart.jpg Step 4: Select Open Step 5: Activate the cursor in the prompt field Step 6: Type: Give me a description of this image Step 7: Select the Upload icon or select the Enter key on the keyboard
3	Video-Related Prompt	Interpolate between images
4	Describing Image Content	Explains what is in an image in detail
5	Transforming an Image	Making content changes to an image, such as sharpening the overall look or fixing missing parts
6	Generating Ideas	False
7	AI-Generated Images	True
8	Translation	Translations should always be checked by a human for accuracy Words can be taken out of context

9	Transform with AI	True
10	Edit Style	Edit and proofread the text in the context of someone never having used ChatGPT
11	Adding Motion to Images	Uploads an image and adds movement to it
12	Generative AI Video Editing Tools	Add a thermostat to a video about smart home devices Add color to a black-and-white video Create an avatar to read a typed script
13	Adapting Content	
14	Content Gathering	Give me details on all popular types of smart home devices and their uses
15	Adding and Removing Objects in a Video	
16	Summarize Content in ChatGPT	your responses. Copy the document's content position 1 In the ChatGPT prompt field, type: Summarize this content position 2 Select Shift+Enter on the keyboard position 3 Paste the document's content position 4 Select the Enter key on the keyboard position 5
17	Generating a Script-Reading Avatar	
18	Display Data	Table Chart
19	Remove Subtitles	Step 1: Activate the cursor in the command field Step 2: Type: remove the subtitles Step 3: Select Generate Step 4: Select the Play iconhelp

#	Question Name
1	Many AI engines know that sentiment analysis should return positive, negative, or neutral __outputs.
2	There are several industry style guides that users can specify in a prompt to format and set the tone _____for content.
3	Data must be fact-checked before outputs can be trusted __.
4	With a typical prompt, users enter information to generate a(n) outcome .
5	Before users style and format data, they must ensure the content is good.
6	Specifying documents to use as research is a good tactic when users want to control the source of data used in a Generative AI output.
7	Users can go back within a(n) thread and refer to a previous output to generate a new one.
8	Checking numerical data for accuracy involves tasks that verify accuracy for historical or current data and verify math when necessary.
9	The benefit of using personas and roles is that the same basic content can be shaped to fit the needs of different audiences .
10	One way users can reshape a generative AI prompt is to provide context for the intended content.
11	An LLM is only as good as the data __it has.
12	One example of a(n) _____ zero -shot prompt is: Create an image of a smart home refrigerator.
13	Having a glossary is important for any situation where a word or phrase __could be mistranslated.
14	Users can customize and rerun prompts as needed when using templates to create multiple versions of content.

#	Question Name
1	Personal and private company data should never be used in prompts for generative AI.
2	Any piece of information that can be unique to a person is considered personally identifiable information.
3	When using generative AI, one should take responsibility to ensure that nothing created could cause harm.
4	While generative AI will affect the job market, it will also help create jobs, especially for people who develop skills using it.
5	One should assume that an AI model will use human-generated content as training data unless one opts out.
6	Intellectual property refers to creations of the mind, such as inventions, literary and artistic works, designs, and logos.
7	Internal company policies help keep data from being leaked to public or unapproved AI models.
8	AI can spread incorrect and harmful information, requiring human oversight to avoid potential damage.
9	The inappropriate use of generated content can potentially lead to civil suits, fines, and criminal liability.
10	A(n) transparency document details how data is processed and used by an AI and the steps taken to avoid bias and discrimination.
11	A smart home device that is only trained to cater to those who speak proper English will not work well for non-native speakers.
12	AI can reflect the biases of its training data, requiring that prompts account for them.
13	Identity theft occurring as a result of AI could result in civil or criminal penalties.
14	Some common biases include race, gender, disability, age, and economic status.
15	Generative AI does not cause bias in itself, but users can introduce bias into it.

16	Prompts can introduce bias if they do not specifically ask for a(n) balanced perspective.
17	One negative impact of generative AI is that it can reduce human interaction.
18	Guardrails in an AI are meant to protect people and help an AI engine stay within ethical and legal boundaries.

Types of AI	Disc-determinates, anal-identi, gen-creates, stat-comp, pred-forec-*****
AI Model Processing	Processing power, high speed....*****
Privacy	Reach out...*****
GPUs for Generative AI	Gpu tend, gpu can handle, gpu process instructions, gpu process images
Training for Image Models	They use text image.....tagged*****
Generative AI vs. Search Engines	Gen AI produce one input.....*****
What types of documents can be used for research when creating an input to inform an output generated by AI? • Uploaded documents	
• Online documents	
What is few-shot prompting? A method for creating targeted outputs that involves giving an AI model examples for context.	
Historical data often changes slowly True	
Users can learn how current data in an AI model is by asking an AI engine. True	
How does reverse prompting differ from typical prompting? Users enter the outcome to generate the information used to create the outcome.	
What is the benefit of revisiting previous outputs in a thread? Users can save time when refining prompts	
A glossary can help an AI model know which words to avoid when making translations. True	
A user generates an output explaining how computers work. However, they notice that the explanation is complex, and they want it to be understood by children. Which follow-up prompt would result in the most targeted output? Rewrite this explanation so that children with little to no computer experience can understand it.	
AI models can derive context for most outputs. False	
What types of documents can be used for research when creating an input to inform an output generated by AI? • Uploaded documents	
• Online documents	
When might users want to create a template using generative AI? When creating similar but slightly different versions of content.	
Users should fact-check historical data before using it. True	

Prompting Technique	Description
Few-shot prompting	Involves giving a prompt some upfront information (examples) to help steer the output.
Self-consistency prompting	Involves running the same prompt several times and getting different results but with similar themes.
Zero-shot prompting	Involves providing no direction or context in a prompt.

What are two methods one can use to verify calculations performed in an output? • Follow the logic of steps taken to achieve the output

• Ask the AI model to show its work

How can users help ensure that an AI model will produce an intended output when entering prompts into the model? • Make the prompt specific

• Avoid abbreviations and acronyms

• Avoid assumptions that the AI model knows what they are talking about

Prompting Technique	Description
Chain of Thought Prompting	Involves going through a step-by-step process to arrive at a desired outcome.
Prompt Chaining	Involves accompanying follow-up questions based on previous outputs.
Generate Knowledge Technique	Involves prompting to generate a general concept and then refining the prompt to be more detailed regarding the concept.

What are three examples of intellectual property (IP)? • Literary works

• Inventions

• Commercial designs

What might be the result of compromised personally identifiable information (PII)? Identity theft.	
A company may be liable for inaccurate information spread by AI .? False	
Guardrails will always prevent bias from coming out of an AI model.? False	
What is a positive impact of AI? Helping people communicate across communication barriers.	
AI can reflect the biases of its training data, requiring that results account for them.	
Prompts can introduce bias if they do not specifically ask for a positive perspective	
What are three examples of potential biases? • Economic status • Age • Disability	
Which three items are considered personally identifiable information (PII)? • Home address • Social Security number • Phone number	
Why should personal and private company data never be used in prompts for generative AI? Prompts entered in could be used as training data	
Which prompt could result in a biased output? List the negative characteristics of the current president	
How can one avoid issues with biased training data while using a generative AI model? By writing prompts in a way that overcomes potential bias	
What are three possible legal implications of using AI-generated content inappropriately? • Copyright infringement • Violation of privacy laws	
• Defamation	
What are three ways to prevent incorrect information from harming a company? Review any content generated for accuracy, Establish guidelines for ethical AI use, Fine-tune models as often as possible	
What is the best method for handling copyrighted data for the purposes of training an AI model? Only use data with permission from the rights holders	
Two models with the same purpose will always have the same biases. False	
What should a transparency document contain? The steps taken to avoid bias and discrimination in data gathering and use	
Only civil consequences will result from identity theft. False	
While generative AI does not cause bias in itself, the biases of creators and users can ultimately result in propagating bias. True	
What are three possible negative consequences of AI? • Lack of equal access • Loss of jobs • Reduction of human interaction	
What are three potential consequences of using AI irresponsibly? • Bullying • Identity theft • Cheating	
There is no true regulatory body encompassing all of AI. True	
There is no way to stop entered prompts from being used as training data. False	
How might guardrails introduce bias into an AI model? By filtering out information about a controversial topic	
What are three possible positive impacts of AI? • Improved efficiency for tasks • Creation of new jobs • Improved communication across language barriers	
A marketing company is new to AI and is learning about the different types of AI.	
Which output is a result of Generative AI? A house that is added to a photo after being described.	
Statement	Yes/No
LLMs can automate repetitive internal processes.	Yes (Oui)

LLMs are trained on huge datasets.	Yes (<i>Oui</i>)
LLMs are completely fact-based.	No (<i>Non</i>)

Statement	Yes/No
Image models are trained on text-image pairs that can be tagged manually.	True
Image models are trained on text-image pairs that can be tagged automatically with the use of machine learning.	False
Image models are trained solely using large datasets of other images to learn rules.	False

A marketing professional is at an international conference and wants to order a latte but does not speak the native language of that location. The person types, "A mocha latte, please." and shows the barista "Einen Mokka Latte, bitte."

Which AI type is being used? Text-to-text

Initial Prompt	Prompt Type
"Write code that will generate a random number."	Zero-shot
"Write code that will generate a random number between 1 and 10."	One-shot
"Write code that will generate a random number between two previously generated random numbers."	Few-shot

OCR (Optical Character Recognition) Input: Image Output: Text	
Talking-head (AI Avatar Generation) Input: Audio Output: Video	
AI Tool	Matching Task
Custom ChatGPT	Can be customized with a specific dataset on how to respond to customer queries.
Google Gems	Can be used to generate a meeting summary in Docs.
Copilot	Uses Power Automate to send an updated sales spreadsheet weekly.
A junior programmer is learning Python and wants to know how to use it to generate a random number. Which prompt will show the code they want to see? Write Python code that will generate a random number.	
Which categories, when used in collecting data, can create bias in Generative AI output? • Gender • Race	
Here are the correct answers for each statement regarding how to structure a prompt to generate a recipe using food you already have in the house:	
Statement	Yes/No
Indicating what food is in the house should be part of the prompt.	Yes (Oui)
Having an idea of what meal is wanted should be part of the prompt.	Yes (Oui)
Asking what is needed at the store should be part of the prompt.	No (Non)
A Generative AI output of the number of trees in each continent is returned in paragraph form. Which prompts would summarize the data, thus making it easier to read?	
• Show the number of trees on each continent in a table format. • Show the number of trees on each continent in a chart format.	

A 9th-grade student, interested in building homes, wants a thorough explanation of the opposite of a cosine in geometry.

Which prompts would give the student an explanation personalized for the student's grade level after an initial prompt that generates a standard response? • **Show an example related to house building.** • **Explain the opposite of a cosine at a 9th grade level.**

Here are the correct answers for whether each prompt is effective at **describing the content of an image**:

Prompt	Yes/No
"What is in the background of this image?"	Yes (<i>Oui</i>)
"Generate a green background for the image of the camera."	No (<i>Non</i>)
"Build a similar image using the background of this image."	No (<i>Non</i>)

Generative AI Prompt	Role
"Create a video showing a beach and a sunny sky with light clouds."	Generating a video from a prompt.
"Create a video that transforms the sunrise image to the sunset image."	Interpolating between images.
"Delete the surfer from the existing video."	Removing an object from a video.

The less time users need to spend verifying text that is supposed to be fact-based, the better.? True

Generates chatbots and virtual assistants for social media → **Meta (Meta AI / “Meta GPT-style” tools)**

Specializes in creating presentations, social media posts, and marketing materials → **Canva**

Focuses on safe and ethical responses → **Claude**

What is a stop sequence? **A parameter that prevents an AI model from continuing to generate content.**

What is the biggest difference between generative AI and search engines? **Generative AI produces one output, while search engines produce multiple**

outputs

How can users prevent OpenAI from using data entered into ChatGPT for model training? Reach out to OpenAI support

Dataset → Contains information used to train an AI model

Hyperparameter → A variable that is set before an AI model is trained

Refinement algorithm → Used to improve generated data

What are hallucinations in generative AI? Incorrect outputs caused by the way the LLM processes the outputs

Here are the correct answers for each statement regarding assumptions in prompt engineering:

Statement	Yes/No
Adding context to an AI prompt will help produce a better output.	Yes (<i>Oui</i>)
It's safe to assume that an AI engine will know what you are talking about.	No (<i>Non</i>)
Giving an AI prompt a persona does not affect the output.	No (<i>Non</i>)

A copy editor is using ChatGPT to help edit the grammar, spelling, and word choice of articles used for a magazine. The copy editor wants to ensure that these factors are consistent for all the articles being edited.

What should the copy editor include in each prompt to ensure grammar, spelling, and word choice consistency among these articles? A reference to a style guide

A sales team wants to use Generative AI to update its customers on new products via email.

What can the sales team use strictly within an AI tool to ensure each customer gets a personalized email but with the same content?

Template

A person looking for knowledge on well-priced restaurants in an area the person is traveling to runs the same prompt several times to get several results.

Which prompting technique is the person using?

Prompting Technique	Yes/No
Self-consistency	Yes (<i>Oui</i>)

Zero-shot	No (<i>Non</i>)
Few-shot	No (<i>Non</i>)
Generate knowledge	No (<i>Non</i>)

For each Generative AI prompt, indicate Yes if the prompt uses a reverse prompting technique and No if it does not.

Prompt	Yes/No
"I am interviewing someone for a graphics design position. What three interview questions should I start with?"	yes
"If I want to improve my team meetings, what specific tips would you give?"	yes
"Which database system would be best to use for data requiring a high amount of statistical analysis?"	No (<i>Non</i>)

A researcher is using Generative AI to look up facts on current events for a newsletter.

How can the researcher verify that the facts in the Generative AI outputs are accurate?• **Use fact-checking websites.**• **Cross-reference the data.**

Here are the correct answers for each statement regarding the impact of AI on the job market and humanity:

Statement	Yes/No
There is a fear that AI will take over jobs and humanity.	Yes (<i>Oui</i>)
AI can serve as a job creator.	Yes (<i>Oui</i>)

Every job will eventually be run by AI.	No (Non)
---	----------

A developer wants to build an AI model and is looking to use Azure Open AI for the model building. The developer notices that Microsoft has guardrails in place for any data in an AI model.
How can those guardrails cause bias within the data used for the model? **An entity defines what is and is not harmful content.**

A technology company wants to build an AI model using data from manufacturers' websites. Some of that data is copyrighted.
What would be the proper way to incorporate that data into their AI model? **The company should seek permission to use the data.**

For which life tasks can one enlist Generative AI to do those tasks more efficiently? • **Generating a summary of large amounts of text.**

• **Generating a grocery list from a recipe.**

What are some legal implications of using generated content inappropriately when using Generative AI? • **Copyright infringement.**

• **Claims of defamation.**

Here are the correct answers for each statement regarding data privacy and Generative AI:

Statement	Yes/No
Human-generated content can be used to train an AI model.	Yes (Oui)
People can opt out of having their data being used in an AI model.	Yes (Oui)
Generative AI engines return the same personal data websites have on people.	No (Non)

Which kinds of content created with Generative AI could lead to civil or criminal actions? • **Bullying • Stalking**

Which Generative AI prompt is using the generate knowledge technique? **Define glassblowing. Then tell me how it is used to make coke bottles.**

Your classmates have formed a study group to prepare for a final exam in their World History course. The group has decided that each classmate will share their notes written over the semester and then use Generative AI to help them prepare for the final exam.

Which prompt would best summarize the information reviewed by the group?

Analyze the uploaded notes and organize the information in chronological order.

The students at your new school have been invited to submit artwork for a mascot. The name of the mascot is the Tornados.
Which AI prompt should you use?

Create an animorphic cartoon image of a Tornado carrying a football and wearing a football helmet.

You've been assigned the task of converting an instructional video to be accessible to viewers who cannot use audio.

Which AI prompt should you use? Add subtitles to the uploaded video.

Here is the correct matching for each prompt improvement technique to its corresponding example:

Prompt Improvement Technique	Matching Example
Context	"Describe the situation, do not assume the AI generator will know the surrounding conditions."
Style	"Provide examples of the tone, or a design guide."
Persona	"Give the AI a role."
Content	"Be specific, do not abbreviate nor assume the AI generator will know the circumstances."

After an initial prompt creates output, which three additional inputs can you use to elicit more targeted output? • **Earlier conversation in the same thread.** • **Documents to use for research.** • **Templates.**

A company is building an AI model to predict staffing needs for a recreation center. They want to ensure personal data is not included in the model to eliminate the risk of identity theft. Possible **civil** action taken by the persons whose identity may be stolen and **criminal** action for violating law.

How can a user avoid the risks associated with utilizing the output of Generative AI? Human oversight.

Which three are positive impacts Generative AI has on society? • **Helps overcome language barriers.** • **Makes life tasks more efficient to do.**

• **Sparks creativity.**

Using the "drag and drop" function, match each problem with the output of the generative AI to a feature of that problem.

Caractéristique	Problème (Sortie de l'IA)
Biais	An outing that favors people of a certain socio-economic status.
Hallucination	The results are not based on training data or similar knowledge.
Mauvaise information	An outlet that presents false information as factual.

A ski company looking to use generative AI wants to know the specific requirements for running AI models to produce results.

High-speed internet.	yes
High-end GPU.	yes
A small amount of data.	No

What types of data should be avoided when collecting data to train a generative AI model? *Personal information *Private company data

For each statement regarding AI and the impacts of generative AI on the labor market, indicate Yes if the statement is true and No if it is false.

There are fears that AI will take control of jobs and humanity.	yes
---	-----

AI can create jobs.	yes
All jobs will one day be managed by AI.	No

A leisure company is looking to use generative AI to develop marketing campaigns.

What factors should be considered when selecting a tool for these marketing campaigns? *cost * ease of use

Which instruction for a prompt for a marketing flyer a advertising a dog grooming buisness is an example of a few-shot prompt? Build a marketing flyer for a dog grooming business. Examples include "groom to bloom" and "doggie waggie."

Which problems with data cause bias(es) wihin a dataset and in generative AI outputs? * Unusual negative feelings due to an event. * Lack of diversity

How can a user avoid the risks associated with using the results of generative AI? Human oversight

You are a biology teacher at a community college. You want to recommend an AI tool to your first-year students to help them learn new concepts, practice writing, and prepare for exams. **Chatgpt**

After creating a result via an initial prompt, what are three additional inputs you can use to obtain a more targeted result? Documents to use for the search.

* Previous conversation in the same thread. * Templates.

What are the three positive impacts of generative AI on society? Stimulates creativity. *Makes everyday tasks more efficient. * Helps overcome language barriers.

A marketing professional is attending an international conference and wants to order a latte, but he doesn't speak the native language. He types "A mocha latte, please" and asks the server "A mocha latte, please." What type of artificial intelligence is being used? **Text-to-text**

Type d'IA (Vert)	Description / Cas d'usage (Bleu)
Generative AI	Create a character in a video game.
Predictive AI	Estimate next year's sales based on this year's sales.
Discriminative AI	Assigns skiers to groups for lessons based on ability.
Analytical AI	Helps a clothing store determine patterns on sales.

Statistical AI	Helps conduct risk assessments on road projects.	
Text Models Open AI GPTx, Google Gemini		
Image Models DALL-E, Adobe Firefly		
Which model uses large amounts of training data to formulate AI-generated content? LLM		
A company is moving toward using generative AI to create images for use in magazine advertisements.		
Which two computing features are most important on a server that will run these image models? robust power supply and a powerful graphics card unit (GPU)		
A narration that turns into a character on screen voicing the narration is an example of <i>audio-to-video</i> .		
Speaking into a foreign language app and seeing a translation is an example of <i>audio-to-text</i> .		
Transcribing a video is an example of <i>video-to-text</i> .		
Typing a phrase and generating a picture is an example of <i>text-to-image</i> .		
Which situations are examples of generative AI models performing tasks for people within self-contained apps? Sending someone a reminder based on a personal calendar in Outlook * Getting a research question answered using Siri		
Meta GPT is used to generate multiple social media posts, given some information.		
Adobe Express is used to create graphic design documents, including flyers, banners, and social media images.		
Claude generates technical documentation based on Application Programming Interface (API) information.		
For each statement used to attempt to create content using generative AI, indicate Yes if the statement will produce content and No if not.		
Requête	Yes / No	
Draft an AUP for a school district.	Yes	
Give me some resume and interview tips for a school district position.	Yes	

Write a story about a new school building opening.	Yes
Show me the exact AUP from a school district.	No
Using the dropdown lists, identify each type of summarization of a report or book.	
☐ This type of summarization pulls the most important sentences from a report or book. Extractive	
☐ This type of summarization paraphrases text from a report or book into a summary. Abstractive	
A catering company putting together a business proposal needs help writing an executive summary.	
Which type of prompt outputs an outline, reviews the outline, and then writes the summary? Chain-of-thought	
For each statement regarding PII and data privacy in Generative AI, indicate Yes if the statement is true and No if it is false.	
True: Static data masks permanently change data used in an AI model, *PII data left in Generative AI can cause identity theft	
False: Tokenization uses fictitious names to mask data	
A professional sports team looking to use Generative AI for marketing purposes wants to know the limitations of Generative AI.	
What are some limitations of Generative AI? output not being reliable,* there are no universal standards on how AI should be used.	
A company developing an AI model to use data from phone conversations to build a chatbot needs to ensure that conversations about customers are not included in the model.	
What settings ensure that these conversations are not included in the model? Privacy settings	
What is the effect of rapidly changing data used to generate output using Generative AI? the current data obsolete	
Using drag and drop, match each prompt to the transformation it will do to existing content generated using Generative AI.	
Asking a document to be formatted using the AP Style Guide is an example of <i>editing and proofreading documents</i> .	
Showing region population trends as a chart is an example of <i>providing a visualization of data</i> .	
Turning a beach scene description into a picture is an example of <i>transforming content into a different media type</i> .	
For each statement regarding prompts that translate content into another language, indicate Yes or No	
True: A single prompt can create content and translate it into another language.	
• An output can be translated into another language in the next prompt.	
False: Content has to be generated in the same language as its prompt before it can be translated.	

An outdoors magazine publisher is looking to use Generative AI to help generate background images for content.

Using drag and drop, match each prompt to its purpose.

Show a picture of two cabins in the mountains → producing an image for a specific purpose.

Show a watercolor picture of a woman and her dog → exploring an artistic idea.

Portray this picture as if it is later in the afternoon → transforming an image.

Which Generative AI prompt is best suited for turning a static image into a video? Animate the image of the mountains from left to right

You have a black and white video of a park scene with a kids playground and kids in the video.

Which prompt would you use to colorize the video as accurately as possible? **Colorize the video, using accurate colors for the sky and grass, skin tones, and clothing colors kids usually wear.**

For each characteristic listed to build a Generative AI prompt that will generate an avatar that reads a script,?

True: The character should lip-sync to the text., *The character should have gestures according to the script.

False:The character should convey complex emotions during the video.

An instructional video is going to be presented to people who do not speak the native language of the speaker.

What instructions, when writing a prompt to automate subtitles, are instructions that should be used within the prompt?

font that is easy to read , * transcription is accurate.

A new LMS administrator wants to learn how XML files are used to configure LMSes. Which prompt should the administrator use to get that information?

explaining how XML files are used to configure Learning Management Systems

A website administrator is having no success trying to generate a description for a martial arts studio. A co-worker suggests adding a persona or role to the input to generate better output.

Which prompt demonstrates the addition the co-worker suggested? **As a high-energy martial arts instructor, describe the benefits of taking martial arts courses at your studio.**

A publisher wants to use Generative AI to translate newsletter articles for a tech magazine into multiple languages. The publisher is concerned about certain words being translated in the correct context.

What should the publisher include in each prompt to help ensure those words are translated as accurately as possible? **A glossary**

For each additional input that can be added to a Generative AI prompt, indicate **Yes or No**

True: Adding documents to use for research, *Referencing an earlier conversation in the same thread
False:Asking for a summarization
A research assistant does some historical research using Generative AI.
What can the assistant do to verify the information presented in the AI output? cross-reference the output and ask an expert on the subject
For each method used to verify the accuracy of a Generative AI output, indicate Yes or No
True:Use a statistical analysis tool to verify the data. * Cross-reference the data.
False:Ask the AI tool to verify the accuracy of the numbers.
What factors in AI cause different AI models to have different biases? Fine-tuning and preprocessing techniques
Which prompt can introduce bias into AI results? Show me all the benefits of MySQL for storing physical fitness data
For each statement regarding the possible propagation of bias in Generative AI, indicate Yes or No
True: - Generative AI can be used to propagate bias. - Not accounting for religious holidays when building a schedule is an example of bias. - Economic status can be a source of bias.
Categorize each prompt for building an image of a baseball field as a zero-shot prompt or a few-shot prompt. Zero-shot prompts: Build an image of a baseball field., * Build an image of a baseball stadium. Few-shot prompts: *Build an image of people playing basketball and then build an image of a baseball field where people are playing baseball. *Using this image of a minor league baseball stadium as a starting point, build an image of a stadium where people are playing baseball.
For each statement regarding the use of copyrighted data within Generative AI, indicate Yes or No?
True: *Copyrighted data is often used to train AI models. A company's process should be documented and transparent when using AI in a professional environment.
False: A company should follow industry regulations regarding the use of copyrighted data in AI models.
How does Generative AI help people communicate effectively across languages? real-time translation and language learning lessons,
A scientific research company wants to ensure its data is not leaked to public AI models. What should the company do? establish an internal policy preventing its data from going to specific places, including public AI models.
Use the dropdown arrows to complete the statement on how to avoid spreading incorrect information through Generative AI and the repercussions if incorrect information is spread. In a company, human oversight is needed to avoid spreading incorrect information. Doing so will help a company avoid financial and legal repercussions.

A person uses Generative AI to create an avatar of a known person and has the avatar say something the person would never say.
What has been created here? deepfake
What are misconceptions of Generative AI? AI may replace human * AI is not equally available to all
Which characteristics about data can cause bias in a model used in Generative AI? Age and nationality
Which three are models of Generative AI? Diffusion , Transformer ,Variational Autoencoders (VAEs)
Which two are types of input you can use with Generative AI? Text and audio Which are three considerations for selecting an AI Tool? Ease of use, Cost, Customizability
If you input the following prompt into an AI generator, what are you seeking for output? "Create a logo containing a pine tree between the letters D and C. Emphasize the colors blue and green."? produce an image for a specific purpose.
What is Reverse Prompting? using the AI's output to reconstruct the original input prompt.
You are creating a science lesson for elementary school students about the invention of the automobile. You issue the following prompt into an AI generator. Explain how an internal combustion engine works. The results are too complex for a young audience. Which additional input can you use to elicit an output appropriate for an elementary school audience? Rewrite for a target audience of elementary school children.
You are writing a story about a cabin next to a lake. You have several photos of lakeside cabins, but you want one that looks like it was photographed in the late 1800s. Which of the following AI prompts should you use? Using the uploaded photos, create a vintage version
Why is aligning AI with human values becoming more difficult over time? Due to increasing complexity, scale, and ambiguity in both AI systems and human values themselves.
regarding Generative AI and the negative impact it can have on society, indicate Yes or No if the statement reflects that negative impact YES: Generative AI risks reducing human interaction., Generative AI can impact human motivation. NO: Generative AI replaces human contact.
regarding how adding to a Generative AI prompt can help increase the chances of getting results one wants.? The style indicated in an AI prompt helps to shape the grammar used in the output. The tone indicated in an AI prompt sets the mood of the output.
In the TAG framework, what does the “G” help define for the AI? The final outcome or target result expected from the AI’s task.
What is the problem with the prompt "Tell me about panthers."?
The prompt needs context.
the societal impact of Generative AI, indicate Yes if the impact is positive an No if it is not.? YES: Generative AI helps people learn more effectively, Generative AI helps people do their jobs more efficiently, Generative AI can reduce human interaction
How can users prevent inconsistencies in AI outputs? Enter specific prompts as inputs.
Which three AI models are self-contained applications? Google Gemini, Google Assistant, Siri

Which AI model can transcribe audio spoken into a microphone?

Determines likely purchases according to demographics → **Discriminative AI**

Identifies patterns for why products are returned → **Analytical AI**

Creates product descriptions of similar descriptions → **Generative AI**

Compares the use vs. non-use of a product → **Statistical AI**

Forecasts future sales → **Predictive AI**

- **Builds, trains, tests, and deploys AI models that it creates** → Azure AI Studio

- **Assists in creating Microsoft Office content** → Copilot

- **Creates content in context and has vast knowledge for answering questions** → ChatGPT

How can users ensure AI outputs are accurate? ☞ **Fact-check the outputs.**

What are four reasons a graphics processing unit (GPU) is more important for data processing than a central processing unit (CPU) for generative AI models? • **GPUs can handle parallel processing better than CPUs**

- **GPUs process instructions more quickly than CPUs**

- **GPUs tend to be more energy efficient than CPUs**

- **GPUs process images and videos, which generative AI uses for inputs and outputs**

How can users address the possibility that outputs from an AI model are unreliable? ☞ **Verify the information in the outputs**

What two resources does an AI model need to process information efficiently? • **Processing power** • **High-speed internet**

Users may benefit from using search engines rather than generative AI for time-based searches. True

- **Adobe Express** → **Helps users with graphic design, video creation, and social media content creation**

- **Stable Diffusion** → **Focuses on text-to-image creation**

- **Gemini** → **Uses abundant data sources to search for content and help create content**

- **DALL-E** → **Generates images from text descriptions**

- **Claude** → **Emphasizes safety when generating content**

- **Meta LLaMA** → **Used for research and gaining further understanding of large-scale models**

How are image-based models trained? **They use text-image pairs that are manually tagged**
